

*Evans Mine*, Township 161, Range 88, Section 30.—This mine lies one mile above the Fleckteen mine on the same side of the lake. It has been in operation from September to January for the past four years. The annual output is from 1,000 to 3,000 tons, much of which supplies local trade. A new entry is being made and other preparations for a heavy fall and winter run. The mine is one-half mile from the Soo road, where a side track is provided for the use of this and other mines at this part of the lake.

There are two seams here, separated by a stratum of clay, one measuring three feet and the other five feet four inches.
