

*Fleckteen's Mine*, Township 161, Range 88, Section 31.—The Fleckteen mine is situated one and one-half miles above the Electric on the same side of the lake. Work so far has been done largely on the entry, which shows the same effect of slipping as occurs in the Electric, and also in the old Kenmare Hard Coal mine. One man is employed during the summer and four or five during the winter, with an output of about ten tons a day. The thickness of the seam is from four to six feet. The mine is naturally drained to the lake, but a pump is soon to be put in operation. An air shaft in the hill furnishes ventilation. Several •other old entries appear near this mine on the lake front.
