

The Yiengst Mine, located in sec. 34, T. 142 N., R. 79 W., is in a 6-foot coal bed, under 60 feet of cover. Nearer the Missouri River, in sec. 3, T. 142 N., R. 81 W., a bed of lignite is partially exposed, but its entire thickness could not be determined, though two miles to the north a bed which is probably the same as in section 3 shows a thickness of 7 feet.¹
