

*The Burton Mine* enters the same seam as the Wadeson, and except that it lacks a power plant, is of much the same nature and is operated in the same way. It is one-half mile south of Sims. An older opening on the opposite side of the coulee is not now operated on account of water. A stream which fills a two-inch pipe flows from the entry. The dip of the coal from the entry renders it somewhat difficult to arrange for the draining and development of these old workings.

The output of this mine last year was 8,000 tons. It is operated only during the fall and winter months. The quality of the coal is satisfactory, and it meets with a ready sale.
