

Opportunities for natural exposures of the abundant lignite seams of this county are given by the Missouri river on the eastern boundary, and by Square Butte creek, a tributary of the Mis souri, and branches of the. Knife river. Most of the information at present available in regard to this county was furnished by Mr. W. H. Mann, of New Salem, whose standing in the community and long acquaintance with the county make his statements of great value. The following seams are reported by him :

LOCATION

Township 141, Range 83, Section 28. Township 142, Range 86, Section 9. Township 143, Range 87, Section 3. Township 142, Range 85, Section 9.

The county will be included in the field work of the Stab:. Geological Survey next summer, and work in this area promises to be very fruitful.
